

Topic:: Create IAM roles for CI/CD.

- Here we create two roles first for “ec2” and second for “codedeploy”

1.

- Open IAM > Access management > Roles > Create role.
- Select **AWS service** IN **Trusted entity type** and EC2 in option **Use case**, click Next.
- Search **AmazonEC2RoleforAWSCodeDeploy in Permissions policies**, select it and click on Next.
- Give that role name and remember that what name you gives for e.g., EC2CodeDeploy and Select Create role.

2.

- Again, Select Create role.
- Select **AWS service** IN **Trusted entity type** and, select CodeDeploy > CodeDeploy in “Use cases for other AWS services:” and click Next and again click Next without doing any changes.
- Give name to the role for e.g., CodeDeployRole and Select Create role.
