

Topic:: Live multiple ec2's db on single RDS

- First launch multiple backend api on ec2 and single RDS, for how! click below link
<https://drive.google.com/file/d/1G9a5prnwA51EuFy08UVwHk4FP7nmGuuz/view>
- Now open Single RDS in MySQL workbench, for how! Click below link
<https://drive.google.com/file/d/1fktmr0Bek5j6AddlOfG2Ao5PqWeKjxf/view>
- Create multiple databases in MySQL workbench and save it there, now as per given first link you can follow same steps and make multiple backend api live on same rds.
- **NOTE:: for connection of single RDS DB to multiple EC2 you can provide same “end point” or also say “DB HOST” in .env file for all EC2 instance and also “DB_USERNAME”, “DB_PASSWORD” are same in all ec2 instance of .env file only “DB_DATABASE” is going to change as per on which DB we want to store data.**
